COMPAQ

MAXIMIZING BATTERY OPERATING TIME

The *Presario*™ *800* with Intel Pentium III processor supports SpeedStep Technology. This technology supports two operation modes:

- **Performance Mode—**the processor runs at maximum speed if the notebook is powered on while connected to an AC power source
- **Battery Optimized Mode—**the processor runs at lower speed to maximize battery operating time if the notebook is powered on with a battery source

To automatically change the processor settings when changing power sources (from AC to battery or battery to AC) without rebooting the notebook, you must install the SpeedStep application.

To install the SpeedStep application, follow these steps:

1. Double-click the SpeedStep icon on the Windows desktop.
2. Follow the instructions on the screen.
